

Electrical Upgrade Kipling Station

November 14 to November 16, 2008

On Friday, November 14th, the TTC will commence an electrical project at Kipling Station involving the upgrading of the station's power supply. This work will include a replacement of a number of components to the main electrical switchboard inside the station. The project will be completed by Sunday, November 16th.

The electrical contractor will begin preliminary work on Friday, November 14th, which involves delivery of materials and equipment to carry out this work.

The majority of work will be conducted inside the station, and carried out **around-the-clock** from Saturday, November 15th to Sunday, November 16th.

A self-contained generator (trailer) will be used to provide a continuous supply of power to the station. The generator will be turned on when the electrical power to the station is disconnected, and shut off when the upgrade work is completed. **(Approximately, 2:00 a.m. on Saturday, November 15th through to 7:00 a.m. on Sunday, November 16th).**

- The generator (trailer) will be parked at the southwest corner of the bus roadway.
- The majority of the activity will be through one of the station's doors within the bus platform.
- Buses will continue to service the station during this project.
- Subway operations will not be affected by this work.
- Electricity to the community will not be affected by this work.

We regret any inconvenience that may be caused as a result of this work.
